

HAND GEL

GELMANI is an alcohol-based product, for a quick and effective antiseptics of the hands.

Thanks to its particular formula it is able to eliminate almost all the microorganisms present on the hands in a few seconds.

The optimal concentration of alcohol gives the product a broad spectrum of action against microorganisms.

Alcohol works by destroying cell membranes following lipid extraction, as well as denaturing microbial proteins and dehydrating the cell.

METHOD OF USE

It is applied directly to the skin and rubbed until completely evaporated, does not require rinsing, dries quickly, leaving the hands fresh and soft thanks to the special formula rich in emollient and moisturizing substances that counteract the dehydrating action of alcohol.

WARNING: do not apply on damaged skin and mucous membranes. Avoid contact with eyes.

SECTORS OF USE

GEL HANDS is indicated for the sanitation of hands in sectors where there is a handling of food: fish processing and fishmongers, bars, pastry shops, restaurants, canteens, butchers, dairies, etc.

It is essential for medical, auxiliary and non-auxiliary staff of: hospitals, nursing homes, medical offices, dental offices, veterinarians, analysis laboratories, schools, beauty centers, etc.

It is also very useful in all contexts where there is manipulation of money: banks, post offices, shops, etc.
