

STRONG MACHINE

POWERFUL LIQUID COMPOSED FOR INDUSTRIAL WASHMACHINE

USE:

STRONG MACHINE is a liquid mixture of great power. It also keep its effectiveness when the quantity of dirt is to much.

STRONG MACHINE can be used through electric soap dispensers.

STRONG MACHINE can directly be added by hand into the wash tank.

BENEFITS:

- **STRONG MACHINE** it was exclusively been conceived for the washing of tins and various glasses in the alimentary industries. The best for a high-powered cleaning of the pieces. It set free from the stains or opacified streakings.
- **STRONG MACHINE** is a mixer of nofoam detergents that assures a strong action. Its special components: inhibitors of foam, also contribute to prevent that the dirty into the washmachine can turn himself into foam.
- **STRONG MACHINE** , Is a highly efficacious mixture that contains a specific regulator of the water hardness, that minifies the possibility that some mineral residuals can precipitate in the water. It can happen both in the areas with hard water that in those with sweet water. It doesn't damage the enamel of the tins, and it doesn't opacifies or discolour the paint. **STRONG MACHINE** is excellent for the washing of plastic containers. It is not suggested to wash aluminium.
- **STRONG MACHINE** is quick and complete for an immediate action. **STRONG MACHINE** in the moment in which it comes in contact with the tins or with the glasses, it immediately start its action to emulsify the dirt very quickly. The advantage of the use of **STRONG MACHINE** , if we make a comparison with all the others chemical that we can found today on the market to be used for the wash-machines, is that **STRONG MACHINE** is provided with special electric dispenser that send correct dosing, getting the best clean in the most cheap way, since it is not possible a wrong dosing.

USE SUGGESTIONS:

For best and more cheap issues our **STRONG MACHINE** should be dosed with an electric detergent dispenser, model Cititalia G A 2/8. In the event of it was not available a dispenser, **STRONG MACHINE** can be added by hand to the approximate rate of 7 or 8 cc. for every litre of water.
