

BACTER 100

BACTER 100 is a mixture of living microorganisms formulated to deodorize and eliminate accumulations of organic debris collection means MSW, bins, and areas surrounding

USES

BACTER 100 is a biological activator synergized in liquid form containing microorganisms, supported by appropriate inorganic substances capable of establishing, in the middle to biodegrade, a chain of reactions in which intersect processes microbial symbiosis.

This system, although Overall, it is highly balanced enough to allow the arrival of the one part, of a high speed in the reactions and the other, a significant accretion Business specification of microorganisms useful in the process of degradation and deodorization. The special bacterial cultures contained in 100 BACTER not performing their deodorant covering odors, but they fight and prevent them actively accelerating thousands of times the natural process which provides for the degradation of organic substances.

ADVANTAGES

- BACTER 100 is easy to use, as opposed to other similar products do not require any awakening or mixing and can be administered manually with a nebulizer, or automatically with distribution systems.
- BACTER 100 sprayed on surfaces, eliminates immediately the herbs nauseating issued by, bins, media, collection equipment and waste areas surrounding
- BACTER 100 liquefies all types of matter Organic: protein, fat, oil, cellulose, starch and human waste, etc.
- BACTER 100 does not contain acids or alkalis corrosive, does not contain aggressive chemicals damaging sewage systems or surfaces surrounding.
- BACTER 100 contains strong bioactive crops to release and keep efficiency discharges and sewage systems by preventing accumulations of organic wastes.

DIRECTIONS FOR USE

To deodorize all the means used for collection and transportation of waste, low-pressure spray BACTER 100 on the surfaces to be treated. Waste collection Compactors, deposits, collection equipment, etc. after having proceeded to wash and rinse final with water, sprinkle with BACTER 100 in Interior For bins: drizzle with BACTER 100 after emptying, close the box to maintain for as long as possible the moisture. Note: If the bins are sprayed with frequency in the emptying phase, prevents putrefaction of organic substances and pathogenic consequences to the surrounding environment, the use of BACTER 100 thousands of times accelerates the degradation of these substances avoiding the triggering of pathogens and the emission of unpleasant odors which are usually neutralized over few minutes

HANDLING OF PRODUCTS ORGANIC NATURAL:

FEATURES - COD. 51E11 pH 6.0 to 8.80 Shape Liquid Color Antique pink Odor Slight Stability 6 months Free from biological agents classified in Annex XI Legislative Decree. 626 of 19.09.94 - (Journal Journal n ° 265 of 12/11/94 Ordinary Supplement # 141) With the changes and additions made Legislative Decree. 242 of 19/39/96 - (Journal Journal n ° 104 of 05/05/96 Ordinary Supplement N ° 75) No toxicity DISPOSAL EWC code 200130 *
