

FOAM 120

USES

FOAM Defoamer 120 is a water dispersible silicone-based.

FOAM 120 finds application in various industry sectors such as:

- Textile
- paper
- leather processing
- production of paints
- polymerization of the resins

BENEFITS

FOAM 120 is a silicone-based. As known, silicone derivatives are today ANTIFOAM of greater application and more high efficacy. In fact, in addition to being able to solve the problem of the foams at dosages very low in most cases, are also chemically inert with respect to the products to which They are added.

DIRECTIONS FOR USE

For the wide variety of application areas and ways of application can not be given a precise dosage.

Generally a dosage of between 5 and 50 ppm is sufficient to solve the problem of foams in most cases.

Before use it is recommended to dilute the product with water 1:25 ratio in order to increase the yield.

The best results will be obtained by spraying the product diluted in areas where there is the formation of foam.
