

BACTER 100

BACTER 100 is a mixture of living microorganisms formulated for deodorizing and eliminating accumulations of organic waste from vehicles for collecting solid urban waste, garbage bins, and surrounding areas.

USES

BACTER 100 is a biological activator synergized in liquid form containing microorganisms, supported by appropriate inorganic substances capable of establishing, in the substance to be biodegraded, a chain of reactions in which intersect microbial symbiosis processes. This system, is highly balanced so as to allow the arrival of a high speed in the reactions and on the other hand a considerable increase of the specific activity of the microorganisms useful to the process of degradation and deodorization. Special bacterial crops contained in **BACTER 100** do not have a deodorant covering smell, but fight odors and prevent them actively accelerating thousands of times the natural process that provides for the degradation of organic substances.

ADVANTAGES

- **BACTER 100** is easy to use, as opposed to other similar products doesn't require any awakening or mixing and can be administered with a nebulizer manually, or automatically with distribution systems.
- **BACTER 100** sprayed on surfaces, immediately remove the nauseating odors emanating from containers, vehicles for collecting garbage, and surrounding areas.
- **BACTER 100** liquefies all types of organic matter: protein, fat, oil, cellulose, starch, human waste and so on.
- **BACTER 100** does not contain corrosive acids or alkalis, it does not contain aggressive chemicals that damage the sewage systems or surrounding surfaces.
- **BACTER 100** contains strong bioactive crops to free and keep in efficiency drains and sewage systems by preventing the accumulation of organic waste.

SUGGESTIONS FOR USE

To deodorize all resources used for the collection and transportation of waste, sprayed at low pressure **BACTER 100** on the surfaces to be treated. Collecting of garbage, compactors, deposits, collection equipment, and so on. After having carried out the washing and final rinse with water, sprinkle with **BACTER 100** the interiors of bins: wet with **BACTER 100** after emptying, close the box to keep it as long as possible in the moisture. Note: if the bins are sprayed with frequency in the emptying phase, it prevents the putrefaction of organic substances and the pathogenic consequences for the surrounding environment, the use of **BACTER 100** accelerates thousands of times the degradation of these substances avoiding the triggering of pathogen agents and the emission of foul odours that are usually neutralized within minutes

HANDLING OF NATURAL ORGANIC PRODUCTS: FEATURES - COD. 51E11

pH 6.0 to 8.80

Form Liquid

Colour Antique Pink

Smell soft

Stability 6 months

Free from biological agents classified in Annex XI of the Decree. 626 of 19/9/94 - (Official Journal n ° 265 of the 12/11/94 Ordinary Supplement No. 141) With the changes and additions made by the Legislative Decree. 242 of 19/39/96 - (Official Journal n ° 104 of 05/05/96 Ordinary Supplement N ° 75)

toxicity No toxic

DISPOSAL C.E.R. Code 200130 *
