

NEAT MET ICT

CONCENTRATED HIGH PERFORMANCE WITH SANITIZER

In renews in the Maximum Security Without Damaging Surfaces.

USES

NEAT MET ICT is widely used to clean, renovate and sanitize the soiled surfaces:

- floors, machinery and equipment,
- hangars, trucks and buses,
- Horizontal and vertical traffic signs
- Truck and equipments for collecting solid urban wastes
- Recycling points,
- guardrail, safety equipments and so on.

ADVANTAGES

- NEAT MET ICT sanitizes and cleans in one operation thanks to dydecilic chain contained in its formula.
- NEAT MET ICT breaks down dirt, patina, layers and it is a very effective mixture of solvents, penetrating agents, wetting agents and synthetic detergents that attack the molecular structure of the dirt of the patinas, fat layers, gummy residues, absorbed fat stains, without damaging the surface. The particles are then emulsified for their complete removal by a cloth or by rinsing.
- NEAT MET ICT destroys the adhesive properties of the dirt binder (many types of dirt are almost glued to the surfaces by means of the presence of chemical binder, forming an alloy between the surfaces, and unwanted foreign matter). Once the original binder was destroyed, the dirt and the layers can be removed quickly by rinsing.
- NEAT MET ICT is biodegradable, and does not contribute to water pollution.
- NEAT MET ICT is not flammable under any circumstances and is not toxic to humans or animals.
- NEAT MET ICT does not corrode metals because it contains a powerful inhibitor to reduce the corrosion of soft metals, iron and steel, which are subject to rust when treated with water-based cleaners.

SUGGESTIONS FOR USE

- Apply NEAT MET ICT in a 20% solution sprayed on the surface to clean and sanitize, let penetrate for a few seconds, then rinse and dry with a cloth.
- Horizontal and vertical traffic signs, recycling points, guardrail, bollards and so on.
- Operating Procedures: spray with a pump the diluted product on traffic signs, wait a few minutes for the product to penetrate, and rinse with a pressure jet (do not let dry the solution on the surface).

For vehicles

- You should clean the vehicle in the shade holding it indoors.
- Thoroughly wet the part to be cleaned up to cool it before applying NEAT MET ICT diluted. Do not let the solution dry on the finish, but immediately rinse after washing.

FEATURES COD. 51D745

- type emulsifier alkaline detergent
- density: 1020-1030 g / liter
- pH 12.5 to 13
- Odor persistent mixed-flower
- Flammability Not flammable
- Low toxicity, do not digest
- Composition: stabilized blend of biodegradable surfactants with the addition dydecil benzyl ammonium chloride and alkali modified without free caustic agents.
